

Exercise -9

Calculate your age in bird years

Write a program that asks for your age in human years.

Hint: Store the age in a variable and calculate your age in bird years.

1 human year equals 9 bird years.

If I am 1 year old in human years, my age in bird years is 9. If I am 2, then my age in dog years would be 18 and so on.

The formula then is this:

Age in bird years = Age in human years * 9
