Exercise No 15

Using numinput() and textinput()

1. Create a program named exercise15.py

2. Use the numinput() function to get an x
    coordinate and a y coordinate. Store each
    coordinate in a variable.

3. Use the textinput() function to ask the user
    for their name.   Store the name in a
    variable.

4. Draw the entered name at the x and y
    coordinate the user entered.
